

# Android TV App

Siphokazi & Mbalentle

A blue parallelogram and a light green parallelogram are positioned on the left side of the slide, overlapping each other and the dark background.

# What are we presenting?

**An Android TV that is used for online streaming of latest tv shows, movies etc.**

## **What is an Android TV?**

**An Android TV is a smart TV operating system based on Android and developed by Google for television sets, digital media players, set-top boxes, and soundbars.**

## **Why choose an Android TV?**

- . We chose an Android tv because it is the new version of television where you get to watch what you want anytime regardless of limitations because there ain't no limits on what you can watch.
- . Moving away from having to wait for the programme to start at it's time, now you can watch it anytime and even download it for future purposes

# What makes this project unique?

.This version of an android tv is unique because of its app, instead of having only google's apps like youtube, this tv will have a variety of app that the user can use to watch their favourite movies or tv shows like Apple TV,Hulu, etc.

.The Discover page is where the actions happen because of the addition of the addition of these new apps to the android tv enhances the user to access their Apple tv, Hulu tv etc in the android tv, this also caters for those who use Apple products to have access to their favourites easily.

. Via the one android tv and every movie site, platform is accessible to anyone regardless of operating systems like Android, and Apple.
